Sevan

Congratulations on an excellent solar installation at KPAC. My sincere thanks to you, Seta, Ani, Ruben, Patrick, Razmik, Aram and all the California Green employees that worked to make this a success. The project came together with minimal disruption to KPAC operations. We were always able to serve our customers. You handled every step of the project exactly as you "sold us" that you would. As you know, we interviewed three companies before selecting California Green. We absolutely hired the right company with the right people.

Below is how we view your team on this project:

Strong planning skills

Strong communications

Quality installation

Attention to Sanitation

Excellent working relationship with the city and power company

Dedicated help with local and national rebates

The roof is full, seven thousand five hundred and eighty four panels, a 1.4 Mega Watt DC system. We are delighted. If we ever do another project, you will be the contractor. If there is anything we can do for you, please contact us.

Sincerely

Robert J. Smola

President and COO
