**Solar Electric System**

Dear Sevan,

It has been over two years since California Green Designs successfully completed the installation of the 170 kW solar electric system on the rooftop of AGBU MDS School. Since then, we have been witnessing your predicted monthly savings come to life.

Given the success of the project and our satisfaction with the outcome, I would like to congratulate you on the quality, efficiency, timeliness and professionalism that your team has displayed, in the office and on the job site.

I would also like to commend the design team. We were impressed that the numbers predicted on the proposal were exactly what we ended up with. This is a testament to the experience and principles that California Green Designs abides by and stands true to.

The benefits of Going Solar are not only reflected on the electric bill savings; they have also had a positive impact on our school, in the minds of the students, teachers, and, parents alike. Our community has benefited as a whole, due to an increased awareness of the environmental and economic benefits of using clean power technology to solve our long term energy needs.

I would recommend California Green Designs to any entity, interested in investing in the financial and environmental benefits of Going Solar!

Sincerely,

**Sinan Sinanian**  
Chairman of the Board  
AGBU MDS School
